ThoughtTrace helps enterprises review and validate critical information in existing commercial agreements and customer contracts. Using a combination of artificial intelligence (AI) and machine learning, the company's SaaS platform reads words, sentences, and paragraphs just like a human does, driving better strategy, decisions, and execution. With results in minutes or hours, not weeks or months, advanced analysis and understanding is your edge.

Why Leading Organizations Choose ThoughtTrace

Business Problem

- Large amounts of manual analysis necessary to identify obligations, opportunities, and risks.

- Agreements and Contracts currently stored in disparate locations, and need to be identified, separated, and classified.

- Combination of factors create an incomplete understanding of materially important commitments.
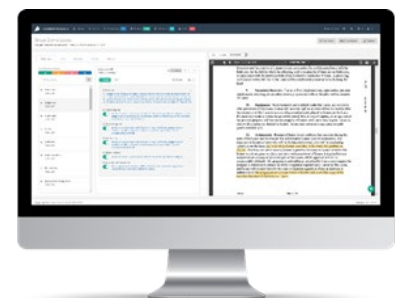

Opportunity

- Have a greater level of certainty on current and proposed transactions.

- Understand obligations and opportunities directly from the documents and not suspect data.

- Make strategic decisions in a much more confident, accurate, and timely manner.

- Focus on the language and provisions that matter most. Stop treating all your agreements the same and bring items to the surface that need immediate attention.

- Quickly and easily discover poison pills and termination language in your agreements and contracts.

Turning Unstructured Information into Actionable Data

The ThoughtTrace platform consists of three modules that work together to provide clear visibility and insights to previously unorganized information, allowing better strategy, decisions, and execution:

PROVISION INSIGHTS
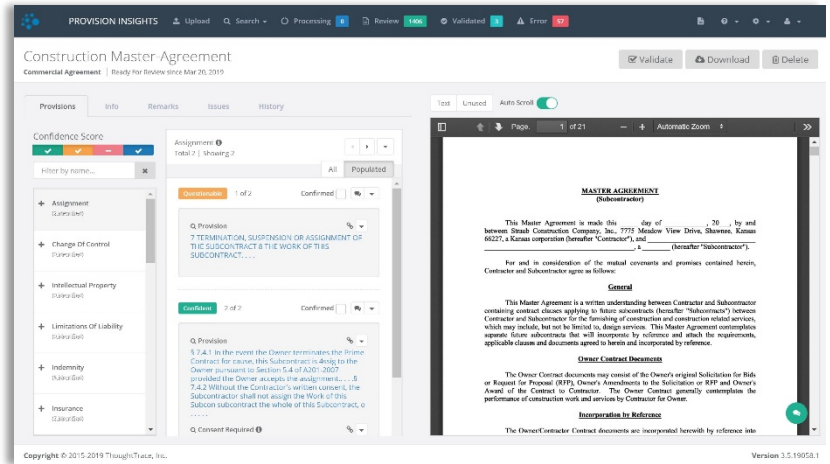

DOCUMENT INSIGHTS

DATA INSIGHTS

**ARTIFICIAL INTELLIGENCE** THAT WORKS FOR YOU

PROVISION INSIGHTS

The flagship of the ThoughtTrace software platform, Provision Insights uses artificial intelligence and machine learning to greatly increase visibility, accuracy, and speed surrounding contractual document analysis. Provision Insights automatically reads, interprets, and extracts millions of critical provisions and data elements from Leases, Right of Way Agreements, Assignments, Title Opinions, Gas Gathering and Processing Agreements, Supplier Agreements, and Master Service Agreements.

Users move from spending weeks and months finding necessary provisions buried deep inside their document population to having the necessary answers at their fingertips in just minutes.

DOCUMENT INSIGHTS

Document Insights increases efficiency and accuracy around a document population by locating, separating, and classifying documents into a searchable, categorized, and organized system .

Capabilities include automated document separation and classification of bulk documents, full text search, view, merge, rearrange, index, and delete pages and documents.

DATA INSIGHTS

Data Insights provides access to the data surfaced by Provision Insights to third party and internal software platforms providing the ultimate flexibility to capitalize on the intelligence Provision Insights produces.

Users can create automations using the platform of choice for tasks such as automated upload of documents, real-time data sharing between applications, and the ability to download data extracted by Provision Insights en masse for customized analytics and reporting needs.
